

What's on your mind today?

hi chatpgt Write a beginner-friendly C++ console program that generates random homework excuses for students.

The program should take the student's name as input.

Store at least 10 excuse templates in a vector.

Use random selection to pick one excuse each time the program runs.

Replace the placeholder {name} with the actual input name.

Ensure different excuses appear each time the program runs.

Add proper comments in the code . help me write a code

What are you working on?

chatgpt my code is giving errors and not showing the correct output please help me correct this code

Create an image

Write or edit

Look something up

What's broken (your debugging checklist)

1. Missing semicolons

- `string name`
- `int seed = name.length()`
- `return seed % excuses.size()`
- `return text`
- `eg.showExcuse()`

2. Syntax mistakes

- Missing `;` after several statements
- Broken class member declaration order

3. Logic issue (bonus bug)

- Random function is not really random → always similar output
